

HANDS-FREE SOOTHING RELIEF

FDA registered LidoPro® is formulated to meet the demands of minor to severe chronic pain sufferers. The patent-pending formulation delivers the highest concentration of safe and effective pain relieving ingredients available today, with several key stabilizing anti-irritant properties to uniformly deliver immediate local pain relief. LidoPro® now contains a patent-pending hands-free Applicator to most safely and controllably administer the medicine, while the newest available 5-layer COEX® tube technology allows for optimal comfort and reduced fragrance.

STRONGER AND DEEPER PAIN RELIEF

“LidoPro® delivers a significantly higher concentration of analgesic, anesthetic, and anti-inflammatory ingredients compared to other topical pain relief ointments available today — and it’s completely hands-free!”

LidoPro® Pain Relief Ointment & Applicator delivers more active ingredients deeper and faster than all the other prescription or over the counter topical pain remedies. LidoPro® contains a highly concentrated combination of trusted pain relief ingredients, delivered through patented emulsion technology and soothed by Lidocaine and other Inactive Ingredient skin conditioners. The numbing effect of Lidocaine quickly neutralizes potential discomfort caused by the other analgesic and anti-inflammatory active ingredients in high concentration, allowing for optimal pain relief and anti-inflammation.

NON-IRRITATING AND SAFE

LidoPro® has been clinically tested on over 50 diverse subjects, demonstrating zero cases of skin irritation or allergy. The formulation also contains several skin conditioners, including Aloe Vera, Chamomile, and Allantoin to sooth and moisturize the skin.

FASTER DELIVERY AND LONGER SHELF LIFE

LidoPro® is paraben-free and contains the patented INUTEC®SP1 micro-emulsifier, effectively replacing the unsafe preservatives found in so many other topical pain remedies. This allows for safe and uniform distribution of the ingredients to painful areas. INUTEC®SP1 micro-emulsion technology stabilizes and disperses the ingredients in their most permeable form, allowing for the deepest, most rapid absorption available. This technology also permits a longer shelf life and contributes to improving the condition of the patient’s skin.

AN UNPARALLELED PATIENT EXPERIENCE

NEW! LidoPro® Ointment now has a completely re-engineered scent-reducing tube and a hands-free Applicator. Now the tubes are both softer and stronger, while maintaining the non-slip texture for optimal grip and portion control. Patients will more accurately administer recommended quantities and eliminate waste, improving safety and outcomes. Applying LidoPro® for effective local pain relief is now incredibly easy and convenient, resulting in a patient experience that is absolutely unparalleled.

ACTIVE INGREDIENTS

- Lidocaine 4%
- Methyl Salicylate 27.5%
- Capsaicin 0.0325%
- Menthol 10%

SYMPTOMS

- Arthritis Fibromyalgia
